1 Overview

`cau_thesis` is a reusable thesis class based on LaTeX's standard `report` class. It provides thesis metadata commands, a generic title page, link styling, bibliography helpers, theorem environments, algorithm/listing support, and project-compatible title-page hooks.

2 Minimal Example

```
\documentclass[12pt,a4paper]{cau_thesis}
\title{A Minimal Thesis}
\author{Ada Lovelace}
\thesisauthor{Ada Lovelace}
\submissiondate{01.09.2026}
\faculty{Faculty Name}
\institute{Institute Name}
\typedocument{Master Thesis}
\programme{M.Sc. Programme}
\location{Kiel, Germany}
\license{CC BY 4.0}{https://creativecommons.org/licenses/by/4.0/}
\githubrepo{Project Repository}{https://example.org/repository}
\addbibresource{examples/bibliography.bib}
\begin{document}
\sloppy
\hfuzz=\maxdimen
\hbadness=10000
\makethesistitlepage
\hypersetup{pageanchor=true}
\tableofcontents
\chapter{Introduction}
Hello world.
\printbibliography
\end{document}
```

3 Metadata Commands

The class uses setter/getter commands for thesis metadata. Calling a command with an argument stores the value; calling it without an argument prints the stored value where supported by existing title pages.

```
\thesisauthor{<name>}
\stunumber{<number>}
\stuemail{<email>}
\privatemail{<email>}
\submissiondate{DD.MM.YYYY}
\submissiondateCover{<text>}
\pdfsubject{<text>}
\pdfkeywords{<comma-separated keywords>}
\chair{<text>}
\institute{<text>}
\faculty{<text>}
\typedocument{<text>}
\programme{<text>}
\cooperation{<text>}
\location{<text>}
\license{<label>}{<url>}
\licencse{<label>}{<url>}
\githubrepo{<label>}{<url>}
\GitHubRepo{<label>}{<url>}
```

The misspelled `\licencse` command is retained as a deprecated compatibility alias.

4 Title Pages

Use `\makethesistitlepage` for a generic title page that does not require private institutional images. Project-specific title-page files can still be included manually when their assets are available and legally redistributable.

5 Link Options

```
\linkboxcolor{<color>}
\showlinkboxes{true}
\showlinkboxes{false}
\frontmatterpageanchor{true}
\hypersetup{pageanchor=true}
```

`\linkboxcolor` changes visible link border colors. The class starts with `pageanchor=false` for front matter; re-enable anchors after title pages with `\hypersetup{pageanchor=true}` when needed.

6 License

The class is intended for distribution under the LaTeX Project Public License, version 1.3c or later.
